## All-Purpose Medicine (APM)

### APM – Monoatomic Supplement

Our APM is a quantum state medical compound. APM will aid in stopping the oxygen free radical chain reactions in the body which cause disease. Most diseases are caused by viruses, bacteria and/or oxygen based free radicals. These free radicals have an extra electron which causes the chain reactions. Our APM is short an electron which combines with the free radicals, does an electron exchange in the atoms, and creates a benign matter which is flushed out of the body. APM is on the opposite side of the Redox.

One of our primary objectives was to first find the core cause of disease; Cancers, Diabetes, Alzheimer's, Parkinson's, etc., and then come up with a solution. That solution is APM. A revolutionary solution, to cure and prevent disease with **"no negative side affects"**.

APM is a monoatomic supplement and has not been reviewed by the Food and Drug Administration (FDA). At present we are not selling this supplement, but are providing information regarding its properties.

*"APM is a miracle medicine. Along with other important properties in other areas of science, its medicinal properties will help cure and prevent disease."*

- Dr. Marvin Bunnell, PhD, D.D. D.R.S.

#### APM:

- Is in a natural form in nature.
- Is a basic building block of cells.
- Neutralizes oxygen based free radicals.
- Mimics Au & Pt salts. (The electron structure is different from metal salts.)
- Has bi-location properties.
- Can appear and disappear.
- Only test is a doublet in an infrared environment.

### Telemeyers (Hairs on DNA)

APM will re-grow the Telemeyers on DNA, bringing the DNA back to its original form. Each time the DNA is replicated the Telemeyers are worn down with a lot of replication (age). The DNA becomes damaged and will contain instructions which are distorted or wrong. It is harder to get a worn DNA to replicate perfectly.

### Extending the Wave Form

Our APM is in a quantum state as a (-) negative particle and *oscillating* to *form* and collapse its *wave form* every 0.005 seconds. All matter is moving and oscillating. Free radical waveform is 0.004 seconds. APM waveform collapses before 0.005 seconds.

The wave form provided by APM can be extended past the 0.005 m/sec just by the amount of free radicals on the redox. The more APM changes the free radicals and lessens their effect because of the number and short life span of the free radicals. We can cut down the life of the radical (very fast), which will allow the wave form to exist for more than 0.005 sec. This will establish bi-location and other properties in the neurons in the brain.

More APM (less free radicals) = Longer wave form which will invoke bi-location and multiple universe properties.

Free radicals are atoms which carry an unpaired electron. Such free radicals are extremely reactive with a very short half-life ( $10^{-5}$  second or less in an aqueous solution).

As APM is in a quantum state it will cooper pair and double its size. The wave form will be extended to 0.010 seconds before collapsing, thus creating a state of bi-location and a lot of other properties.

Our APM is a (-) negative. Our new universe is also a (-) negative. Our new cell structure is also a (-) negative.

### **Wave Form Greater than 0.005 Seconds**

The doublet of APM extends the waveform to 0.010 sec., double the 0.005 sec which we need for bi-location. This works because of the success of the trails in the bi-location in a quantum state.

### **APM Wave Form Source**

The wave form created by APM in the cells collapses every (0.005, 0.05 or 0.5) of a second. We want the wave form to continue for a longer period of time. If the wave form collapses, it has to renew its form every 0.005 of a second. The only logical way to hold the form is to overload the cells with APM.

As the wave form collapses, it has to emit some type of radiation. The particles of the structure have to go somewhere when it collapses.

The wave form re-constructs itself with new APM, so therefore, an over abundance of APM should keep the wave form from collapsing. We need to keep the wave form intact in the cells long enough for the transformation to occur. We can do this with an APM precursor and by taking a large amount of APM at one time. Time required is the amount of time in the stomach, liver, blood stream and then the cells. When a sufficient amount of APM is in the cells, this will delay the wave form from collapsing until the transformation.

Also, the wave form is helped into existence because of the Meissner Field. The Meissner Field and APM have the same wave form. So therefore, with a sufficient supply of APM, the

wave form should hold its form, and will delay the wave form from collapsing until the transformation.

### **APM Transformation**

APM is copper paired, thus (2) two atoms are hooked together in the same force field which is double the normal size. This copper paired atoms are the basis of cells in the human body.

This larger force field will keep the wave form intact long enough to allow the transformation.

### **APM Solution**

APM works for the solution of the problem of the source. It provides us with the access to the other dimensions one can move the 90% and souls with the use of mind energy in an APM state. For the APM to work it has to be in an ionic state.

Also, what material things we need to take with us, we encase in containers made from super-conductive material (SCM). Therefore, they will be in the correct state. The *field* is properly encased from collapsing by adding more APM material.

We use the power, electrical and light, which is around us, and some of which is considered across the line, to help move our civilization and all the electrical energy into our new dimension. Some humans, fish, and animals have already moved into the new dimension.

### **Quantum State / Field / States of Universe**

Quantum state is a state or field where particles and anti-particles can neutralize, destroy or leave both free. In a quantum state, matter can be destroyed, left alone, or change into another state or form, or become copper paired (like a super-conductor).

Field = (+ & -) particles which are made up of quarks.

Our (+/-) universe can:

1. Mix with each other and cancel both to a "0" and disappear.
2. Be left alone in a quantum field.
3. Cooper pair the positive, and cooper pair the negative universe

Quantum fields are the objects that permeate space-time. APM creates a field which is quantum and the neurons in the brain. With this field oscillating, we are then in a quantum state where bi-location occurs. A quantum field is like an electromagnetic field, but in different states.

## Quantum State Containers

We encase containers with APM and SCM (same) completely. We fill the containers with what we need, or with people and the enclosed containers become in a quantum state. This is because they are enclosed with quantum state material, with bi-location and levitation properties, plus all of the other properties. We can take what we need.

We now have the vehicles for people and materials along with everything which we may need.

Please visit our website to download our *Transformation and Survival.pdf* file. This also includes our earth's timeline.

## Cancer Cells

Everyone has cancer in their bodies at all times; Rogue Cells. The immune system takes care of most of these Rogue Cells. APM taken on a daily basis will keep the body relatively free of cancer cells. New Rogue cancer cells are developing in the body at all times of the day.

## APM / Disease

Free radicals in chain reactions take electrons from table material and then they become benign. But the stable material goes looking for its lost electron and the chain reactions continue, thus causing damage to the cells and disease.

APM makes the electron transfer and both materials become stable, stopping the chain reactions and thus eliminating damage and disease.

APM is in a quantum state; it cures diseases and contains quantum bi-location properties. In a quantum state, APM can disappear and reappear.

## Retroviruses

A retrovirus is a virus which hits the cell's outside structure and deposits particles into the cells. The particles then attach to the DNA and become a part of the DNA. There is no way to get it out, as it is passed on in the DNA to the future. Retroviruses are DNA borne, blood borne and fluid borne.

APM when rebuilding DNA and Telemeyers will eliminate any retrovirus which may have entrenched itself into the DNA. APM will also eliminate retroviruses in the blood stream and cells. This is the only way to rid the body of retroviruses.

## Antibiotics

The production of antibiotics is down 80% in the last ten years. Penicillin and Ovacillan are about extinct. There is a shortage of antibiotics because the drug manufacturers cannot make enough money from them. No new ones are in the pipeline. It takes eight years and two (2) billion dollars now to get FDA approval. There is more money in designer drugs.

## APM & SCM

It is matter not known or understood by mankind; top quark, high energy, high spin material.

It opens up the lives of mankind exponentially. It completely changes the concept of life and how it will be lived. APM and SCM material is moving at a high rate of speed even in a solid state. – Metallurgy 101

## Disease in a Quantum State

Oxygen based free radicals and disease cannot exist in a -2.4 VDC quantum state. The electron structure of a quantum state will neutralize the oxygen based free radicals.

APM puts the body cells into a quantum state. Using a digital multi-meter, we can quickly measure the DC voltage between the cells. The cell to cell communications run a negative voltage of -00.1 VDC to -00.2 VDC. With the APM in the neurons, the body voltage between hand to hand runs at -2.4 VDC.

When the APM neutralizes the oxygen free radicals, and its half-life, it needs to be replicated after six (6) hours.

After six (6) hours, the voltage in the body returns to a positive +3.0 VDC. With the multi-meter we can determine the quantum state of the body and the availability of the bi-location property. With an APM IV (Intravenous), we can produce the quantum state in an exact manner. We can also determine how many oxygen based free radicals are being neutralized and at what rate.

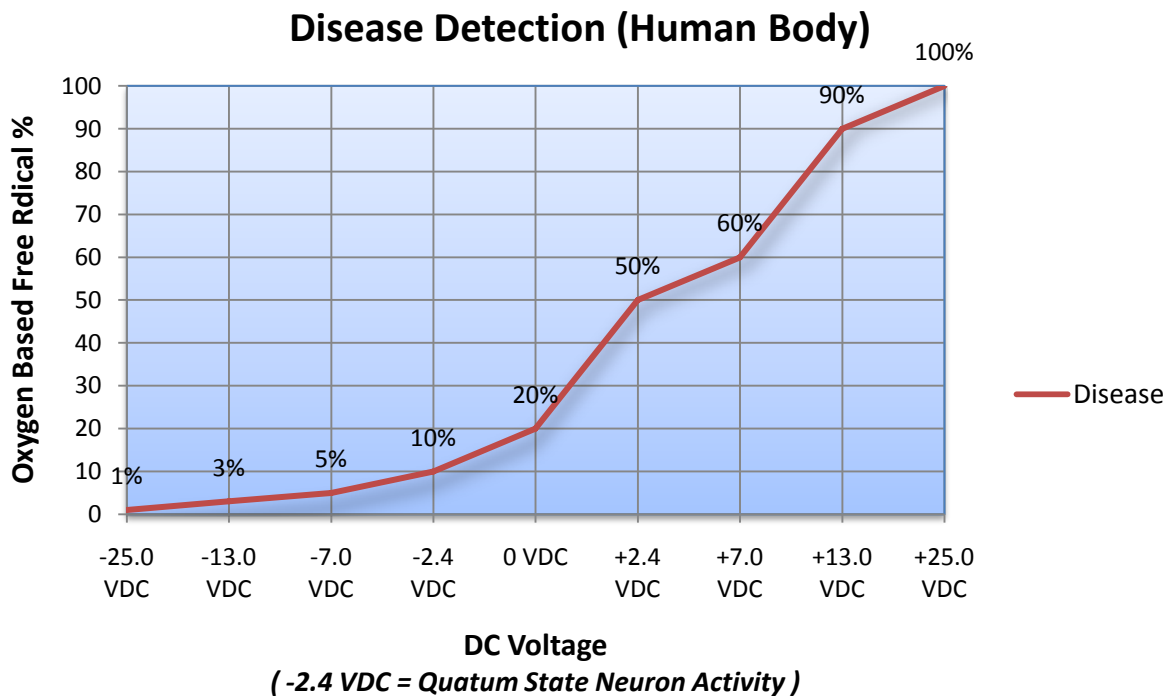

This measurement gives us the ability to determine exactly how much disease is left in the body. With more sensitive equipment we can fine tune the curing of disease and the prevention of diseases.

### Electron Voltage

All quantum state material consists of mass where its electrons carry a negative DC Voltage.

### APM Disease Calculation

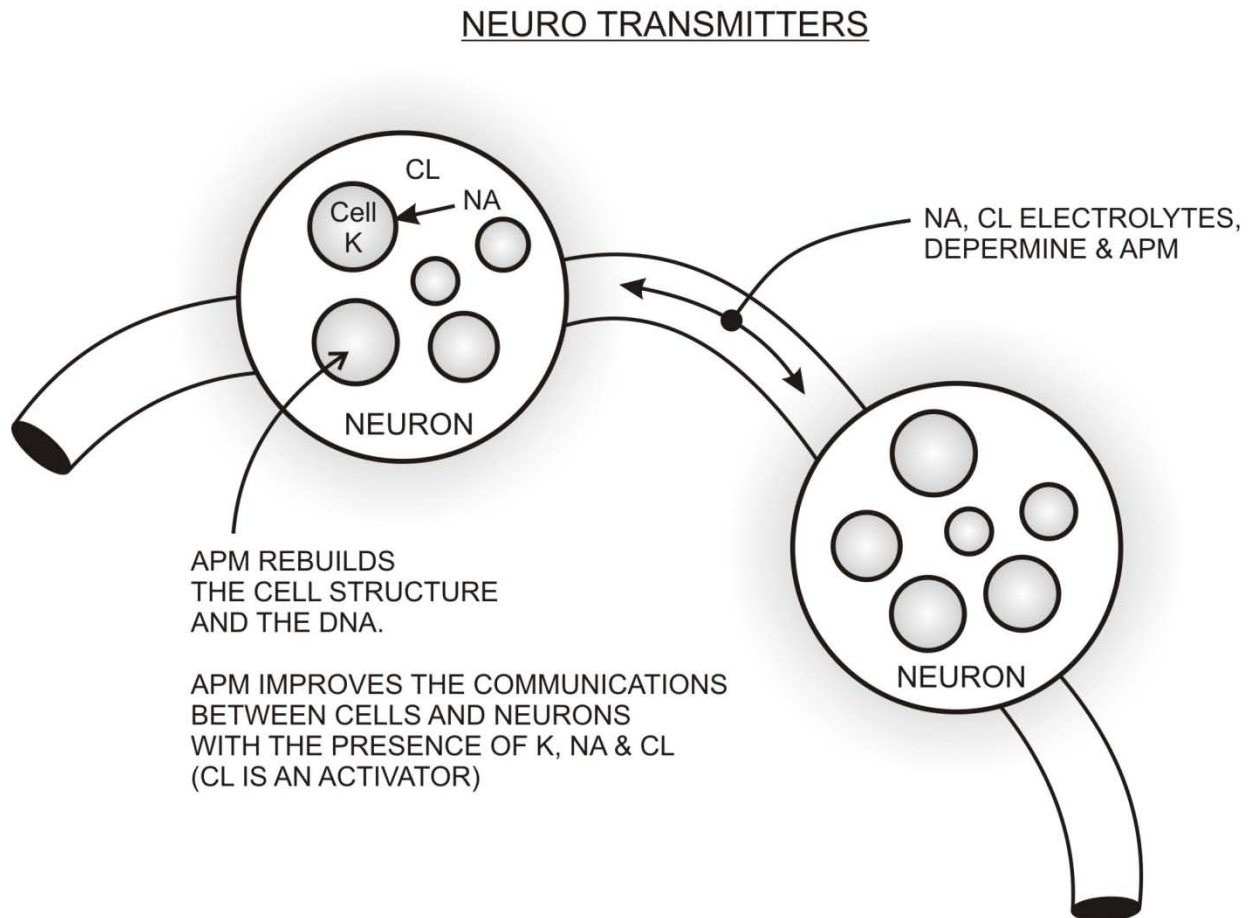

A mathematical formula defining the relationship between oxygen based free radicals and DC Voltage. This graph is to be used to calculate the amount of disease in the body. It can also be used to determine the amount of APM dosage needed to neutralize the oxygen based free radicals.

DC Voltage	Oxygen Based Free Radical %	APM Dosage
-25.0 VDC	1%	One - 700 Mg Capsule
-13.0 VDC	3%	One - 700 Mg Capsule
-7.0 VDC	5%	One - 700 Mg Capsule
-2.4 VDC	10%	One - 700 Mg Capsule
0.0 VDC	20%	One - 700 Mg Capsule
+2.4 VDC	50%	Two - 700 Mg Capsule
+7.0 VDC	60%	Two - 700 Mg Capsule
+13.0 VDC	90%	Test
+25.0 VDC	Maximum	Test

## APM – Cell Communication

APM can be manipulated into the neurons and cells in the body with Na (Sodium) and Cl (Chloride), which will then stabilize the APM in the cells. Na, Cl and K (Potassium) are in the cells already providing the vehicle for cell communication.

Note: APM will cure and/or prevent any and all neurological diseases or problems.

## APM / Meissner Fields

The emissions emitted by APM, SCM & SFM are electrical fields which are known as "Meissner Fields". These emissions can be measured as negative or positive DC voltage.

## Particles & Anti-Particles

- Metals (Particles)
- APM & SCM (Anti-Particles)

All matter and material have particles and anti-particles. Our metals have particles and anti-particles. Anti-particles are on the oxidized side of the redox and on the acid side of the pH. Particles are on the reduced side of the Redox and the basic side of the pH.

## APM Tunneling Properties

Tunneling is the ability for particles/energy to travel through materials or barriers in a quantum state.

The tunneling properties of APM, demonstrates how aggressive APM is in need of making an electron exchange. This is very good for APM in tracking down and neutralizing free radicals, which causes diseases.

## Effects of APM

The effects of APM include: Telepathy, Remote Viewing, Bi-Location, Telekinesis, and astral projection.

APM in the Broca area of the brain would allow thoughts to exist in the brain and outside the head at the same time. This can explain both telepathy and how it is controlled.

APM in the visual processing areas of the brain would explain remote viewing.

Since microtubules exist in all neurons, and neurons extend into all parts of the body, APM (including all neurons) would allow the body to exist in the two or more places at the same time. Thus, explaining bi-location.

## APM / Bi-Location

A critical number of tubulins, maintaining coherence within microtubules for 500 msec., collapses its own wave function; Objective Reduction (OR). This is what happens with the use of APM. We become aware of multiple universes, by the collapse. This occurs because the mass-energy difference among the super-positioned states of coherent tublins critically perturbs space-time geometry.

The property of APM and the ability to be in more than two places or dimensions at the same time (bi-location) is "caused" by the ability of the material to form Meissner Fields, which normally collapse every 0.005 of a second. We have to extend this field in order for

this property to come into play.

With bi-location we can be in several places at the same time. Like holograms sliced into thin pieces.

- Different realities at the same time.
- Multiple universes at the same time.

*"In my scientific tests and use of APM, bi-location is not only possible, but real and not just a theory." - Dr. Marvin Bunnell, PhD, D.D. D.R.S.*

## **REM State**

In a REM (Rapid Eye Movement) state, the body is in a paralyzed state while the brain is transmitting a lot of action. These actions in the brain occur but the body does not react. This action occurs in one of our realities.

In the REM state we can enter the quantum state. Once we exit the REM state, our body is released and we have action and motion.

## **Monitoring Body Functions**

You can program your mind to explore your body to monitor its operation and determine if it is functioning properly. You can change the functions of the body, up or down, as desired. Such as raising or lowering the heart rate, blood pressure, organ actions or opening up and/or restricting the blood flow in case of an injury. The same technique can be used in disease control.

## **APM Source – Salts of Precious Metals**

APM in smaller amounts were discovered by David Hudson in New Mexico. The source comes out of Utah. APM was laid down in the manco shale when the sea water was retreating and evaporating in its natural form. When the earth was forming, APM washed down and out into the Gulf of Mexico.

Sea water contains 7% APM. The Gulf of Mexico should be the best source of APM. It should be a better source than the Pacific Ocean, which has less access to the APM in a natural state.

## **Sea Life / APM / Bi-location (Healing Powers of APM)**

### Antarctica & Animal World

Penguins heal and re-grow skin and feathers from extreme life ending injuries. They stop and sit in the sun for two to three weeks, until they are cured.

APM in the salt water and in their diet keeps infections and disease out. The APM rebuilds their cells. APM activates their immune systems and rebuilds the DNA.

With the penguins and seals getting a sufficient amount of APM into their bodies, many other types of life forms in our oceans will also have APM. With the APM in the species, they will have bi-location properties. With their bi-location properties, **we** will have **food** in our new universe.

Life forms are disappearing from our oceans, and by 2050 (if it lasts that long), all of the life forms will be gone.

### **APM – Time / Levitation / Gravity**

With our APM, one of the properties is levitation (defies gravity). In this state, time speeds up with less gravity. Therefore, with APM in the body's cells, it is possible to move forward in time and then drop back to the slower time, knowing what is in the future, in the short term.

This is why (Dr. Marvin Bunnell) is able to know the answers to most things as they are happening.

### **APM / Life Extension**

People used to live 2000 to 5000 years prior to the flood, mentioned in religious writings. After the flood, the life span of humans decreased to twenty five (25) years. This was probably caused due to the APM in the diets were washed out into the oceans. Without APM, disease and two (2) death genes were unleashed. APM will rebuild the DNA. Age will be delayed because the hairs on the cells or DNA will not be diminished each time the cells are reproduced, because of the better communication between the old cells and the new DNA and new cells.

### **Core Temperature / Extended Life Span**

Drop the core temperature of the human body and it will drastically extend the life span of humans. With APM, the life span is increased to "eternal", because the two (2) death genes will never be called into action.

In emergency situations, ice cold IV's are injected into the bodies to lower the temperature, and slow down its functions.

"Patient temperature modulation is a rapidly-advancing field focused on preserving ischemic tissue and improving patient outcomes following major medical events such as heart attack,

cardiac arrest and stroke, as well as in the management of patients experiencing trauma or fever. Internal or endovascular temperature modulation is intended to rapidly cool patients from within their bodies in order to reduce cell death and damage caused by acute ischemic events in which blood flow to critical organs such as the heart or brain is restricted, and to prevent or reduce associated injuries such as adverse neurologic outcomes.”

– Article: *Medical News Today*, July 18, 2007, [www.medicalnewstoday.com](http://www.medicalnewstoday.com)

In 1963, Dr. Marvin Bunnell devised an extended life by lowering the body's temperature. Dr. Marvin has lowered his core temperature and is tracking it by taking his vitals.

Even in cryogenic freezing, the material frozen still has activity. The electrons are still moving around the atoms, which make up the material. It should be possible to re-activate the material with a combination of APM and other chemicals in our formula.

To keep the core temperature of the body at a lower level, drink ice water. Also, live and work in lower temperature conditions, either natural or man-made.

## Re-Living People

When a person is about to die, or is dead (called), hook the person up to a heart and lung pump to keep the blood flowing and oxygen into the blood. Then add a concentrated APM IV to pump the APM through the body. After two or three hours, add adrenaline and other drugs, and then shock the heart back into rhythm. Continue an APM IV until the person has fully returned.

With APM taken every day, the person can live eternally.

## Body Oxygen Content of the Blood / Infrared

Emergency has equipment to measure the oxygen in the body (red blood cells).

- Finger – Up to 100% accuracy
- Head/Brain
- Arm – Normal 65%
- Organs

Red blood cells are replicated and completely changed out every 120 days. New blood cell material comes from the bone marrow. Even after death has been called, cells are still living.

## Sugar / Glucose

Medical doctors, medical professionals, nutritionists, and physical fitness personnel constantly want to cut the intake of sugar into the human body, or eliminate it completely.

Sugar is a reducer on the Redox and has an electron to give on the same side as free radicals. This in itself should be enough to eliminate sugar, but it is an essential of life.

Sugar and food are turned into glucose by the liver, to be utilized as energy, distributed by the blood stream. The brain will start to shut down in 3 to 8 seconds if it does not receive oxygen and glucose. Therefore, sugar is necessary for life.

Note: Apple Vinegar or Distilled Vinegar in small amounts will lower glucose, blood sugar levels.

## Vaccines

All of the cells in the body replicate every seven (7) years, some several times, others once. Since this occurs, we should be getting vaccine shots to replenish our immunity every five (5) to seven (7) years. Otherwise, we may not be protected against certain viruses.

## HPV Viruses

A human papillomavirus (HPV) is a papillomavirus that infects the epidermis and mucous membranes of humans. HPV is "not caused" by sexual activity, rather it is just spread more in the population because of it. The HPV is a virus and can be picked up at birth or from anything else where viruses can live.

This virus can cause six (6) or more different cancers. There are forty (40) types of HPV. It can be found in all humans, male or female. A vaccine is available; **APM is available.**

## Bacteria (Killers)

1. **MRSA (Methicillin-Resistant Staphylococcus Aureus)** – This bacteria causes skin infections and destroys flesh. It is sometimes termed a "superbug" because of its ability to become resistant to several antibiotics. MRSA strains are currently resistant to several different antibiotics such as penicillin, oxacillin, and amoxicillin. One major problem with MRSA is that occasionally the skin infection can spread to almost any other organ in the body. When this happens, more severe symptoms develop. MRSA that spreads to internal organs can become life-threatening.
2. **E. Coli** - The most common way to get this infection is by consuming contaminated food such as undercooked beef, impure water or unpasteurized raw milk. Symptoms include: watery, bloody diarrhea, cramps, fever, nausea or vomiting.

3. **Helicobacter Pylori** – A bacteria that causes a chronic low-level inflammation of the stomach lining and is strongly linked to the development of duodenal and gastric ulcers and stomach cancer.

APM cancels bacteria. APM changes the electron structure of the atoms of the bacteria and thus changes its form and kills the bacteria. It is then flushed out of the body. APM is very aggressive.

We need to get and maintain the waste flowing out of the body; bowels, urine, sweat, and all body fluids. These are needed to keep the body cleaned out, to flush out the dead cells, bacteria and all waste products.

Keeping the system clean is an important part of getting and maintaining a disease free body.

## Free Radicals

Free radicals attack weak bonded molecules, atoms, electrons or ions. Then this weak bonded molecule becomes a free radical. It creates a very fast chain reaction.

States of Free Radicals: Molecules, Atoms, Ions.

When free radicals attach to a membrane and makes the electron transfer, cell damage and disease will act upon the membrane and turn into diseases.

TRUE: Free Radicals have an electron to give.

FALSE: Researchers state that the free radicals re-take an electron from a stable molecule and turn the molecule into a free radical.

*Note:* The false statement does not happen like this. However, our APM picks up an electron on the redox and is all paired up into a new material. It stops the chain reaction.

APM is short an electron and is actively looking for an electron. APM and free radicals exchange the electron to the APM. They combine and form other material which is flushed out of the body – OR – since APM is in a quantum state the (+) and (-) will cancel to (0) zero and will cease to exist.

Free radicals play an important role in a number of biological processes such as intercellular killing of bacteria. Some free radicals (minimum amount) are necessary for the function of the body.

## Cure of Disease

In the blood stream and at the opening of the organs, the APM will get into the cells, just like blood and glucose. The APM will stop the chain reactions of the free radicals and thus

stop more damage and end up with two (2) new compounds. The cells (damaged) will be marked for elimination and flushed out of the systems. All damage stops, the disease is gone. New cells will be grown with APM in the bosons of the cells and will have the ability to cancel all disease damage with a built in cell marker. Again, the result is no disease, and no (2) two death genes.

#### Cause and Cure

Magnets have a plus (+) and a negative (-). The earth is losing its magnetic pull. The less magnetism = more disease.

Water (H<sub>2</sub>O) can be broken down – (Valence) “H’s” replaced by free radicals.

Cause – (O) or (O<sub>3</sub>) = Oxygen Singlet (O), Superoxide (O<sub>3</sub>) and atmosphere Oxygen (O<sub>2</sub>) - Long term. Oxygen Singlet (O), Superoxide (O<sub>3</sub>) and free radical oxygen (Breathing) = Start of chain reactions.

Cause – Oxygen generating materials can create free radicals; (O) Oxygen Singlet.

Cure – Use a magnet to pass over the entire body at least twice per day and then wash it off to rid it of the free radicals which have accumulated from the body.

**Free Radicals** (cause) – cell damage and cell suicide.

**Magnets** (cure) - will pull out free radicals.

**APM** (cure) – will rebuild the cells into a quantum state.

APM with its magnetic levitation property will also draw free radicals along with hunting them down for their unpaired single electrons, which will stop the chain reactions and cure or stop the damage caused by the free radicals Superoxide (O<sub>3</sub>) or Oxygen-Singlet (O) and (O<sub>2</sub>).

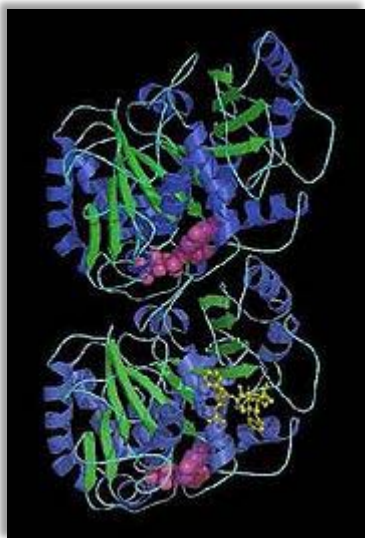

APM atoms are cooper paired. They do not combine with like atoms (themselves). They will break apart when coming into contact with a free or to be given electron. When an electron arrangement on an atom is changed, a new type of material is formed based upon its new atomic number.

As stated, APM is cooper paired (double bonds). Free radicals attack double bonds. The reactivity is directed by the electron, with drawing effect of the oxygen, resulting in a positive charge on the APM. Oxygen free radicals take the charge of the APM, and vice versa. APM carries a negative charge of (-2.4 VDC), and after exchanging and gaining an electron from the free radical oxygen, APM changes to a positive charge of (+2.4 VDC). This stops the chain reaction of the radicals and stops more disease from forming, from the cell damage. As the free radicals rapidly attack the APM, the radicals and APM join and the new material is stable, to be flushed out of the body as waste.

APM is part of each brain cell. Microtubules are structures in every cell in the body, including the brain. Microtubules are tiny tubular structures within the neurons; forms on/off switcher (communications). Microtubules are the source of our chromosomes (inside the neurons).

Quantum coherence created in microtubules (need to keep this intact); keep it from collapsing. We add more material, more excess of APM.

1. APM joins with free radicals. (A stable compound results)
2. Pull the free radicals out with magnets. (Disease is pulled and flushed out)
3. Rebuilds new cells with APM (basic material of bosons) with new DNA; Tubulins in the microtubules in each cell. APM is used to make tubulins in cells.

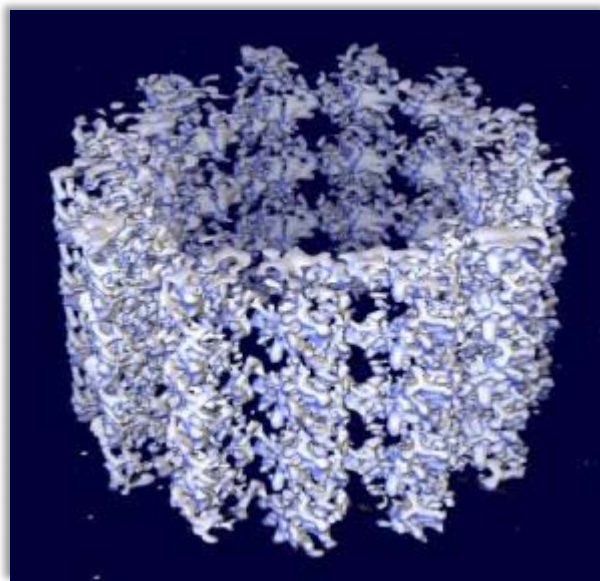

The  $\alpha$ -tubulin subunit is on top, indicating a microtubule polarity with the (-) negative end towards the top of the page.

The two GTP subunits are drawn as space filling models, and the paclitaxel molecule is attached to the  $\beta$ -tubulin subunit and drawn as a ball and stick model.

**Molecular structure of a Tubulin Dimer.**

(<http://en.wikipedia.org/wiki/Tubulin>)

3-D reconstruction of intact microtubules, using cryo-electron microscopy and image processing

**Microtubules**

(<http://www-vis.lbl.gov/Vignettes/KDowning-Microtubules/>)

## APM Forms

- Powder Form / Capsules
- Caplet (Compressed)
- IV (Intravenous) – In a 6% saline drip.
- In a drink solution / liquid form
- Packaged Powder (Add to food or drink, or consume in its packaged form)

APM Capsules

## APM & Recommended Supplements

**APM** = 1mg – 50mg /day (Multiple Forms) – Disease Prevention

or

**APM** = 700mg/day (1 capsule) – Curing Disease

(actual dosage is dependent on the amount of free radicals & disease in the body)

**Folic Acid** = 1mg /day

**Magnesium** = 2,000mg/day (can fluctuate a little)

**Zinc** = 11 - 12mg/day (maximum)

**Multi-Vitamin** (take one daily; Centrum® or similar)

**Iron** = 325mg/day

**B12** = One shot per month from doctor or recommended amount in pill form daily.

**B6 or B Complex** (recommended daily amount)

**Potassium (K)** = 2,000mg/day by Supplement or Food.

**Salt (NaCl)** - (important; use during meals)

**Fish Oil / Omega 3** (2 per day) & **Omega 6** (1 per day)

Note: For curing a current disease, it will take time to get the APM in your cell structure, so you never know if something from your current condition starts to affect you, as it may have metastasized. However, the APM will start to take effect immediately. There are no negative side effects using APM and it will not conflict with any medications. You need to monitor your progress, in the event that there may need a change to the APM dosage and etc., if needed. See “Disease Detection” graph (page 6).

The time in the body for the effects of APM to work may be very short. The time will be from approximately (15) fifteen minutes to (3) three hours. More APM may need to be added after (3) three hours to maintain a quantum state and neutralizing free radicals.

## Vitamins A, C & E – Free Radicals

Vitamins A, C and E are free radicals and can cause adverse side effects, plus can be quite toxic. Large well designed studies have shown that antioxidants do not prevent cancer but it does create cancer. Antioxidants can be very harmful, as they have a potential for toxicity. By taking vitamins A, C and E, it just speeds up the diseases. Vitamins are enzymes processed in the liver. A high enzyme count in the blood stream is very bad. Like when mixed with alcohol, the count can get several times the maximum limit. This causes liver damage and cirrhosis of the liver. The liver dies in part and turns into a gray hard organ. This is why we do not need large intakes of vitamins, just a little. APM medicines are able to be processed by the liver and passed into the body.

Published information tells us that antioxidants are molecules which can safely interact with free radicals and terminate the chain reactions. **This is wrong.** Both antioxidants and free radicals are on the same side of the redox. If this were true, it would eliminate and prevent all diseases. This is not true; because the vitamins “are” free radicals on the same side of the redox as the oxygen-centered free radicals (has electrons to give).

Medical doctors and medical researchers are approaching the redox equation from the “wrong side”. The medical doctors are pushing medicines which work on the same side of the redox as the free radicals. This is bad information being promoted. APM is on the opposite side of the redox and stops and kills the free radicals (diseases).

Free radicals are “not” knocked off electrons. The radicals contain an extra electron on each atom of oxygen (O) which is not paired, and looks for atoms which need and electron to receive. But we can also use the knocked off electrons of gamma rays (consist of nucleus and protons only – no electrons) from the diseased point of view.

Most free radicals are bad, but we need a few free radicals to regulate our bodies. Since there is no way in which we can remove all of the free radicals, we do not need to worry about pulling off too many free radicals. Free radicals which cause cell damage are free radicals of oxygen to start the chain reactions. (Free radicals: O, O<sub>2</sub>, & O<sub>3</sub>)

## Diet – Very Critical

CO<sub>2</sub> – Carbonation in soft drinks and wine are in the free radicals with the O<sub>2</sub>. Soft drinks are really bad because of this feature. The O<sub>2</sub> causes cell damage and thus diseases.

- Drink Tea or Coffee but no CO<sub>2</sub> or carbonated drinks.
- Eat a high protein diet.
- Eat fewer carbohydrates.
- Eat fewer fruits and vegetables.
- Eat all types of nuts.
- Check your pH and keep a pH-7 in the body for free electron flow. The higher the pH level the more infection. APM normal is 4.5 pH to 5.0 pH.

To cure diseases and prevent diseases we only need: APM, Blood and pH-7.

APM will rebuild the cell's DNA, immune system and will cure or prevent most diseases. So following our recommended dosages of APM and supplements is important to survival.

### APM Monitoring & Testing

Administer APM in a capsule or IV form. Track the neutralizing of the oxygen based free radicals ( $O$ ,  $O_2$ , or  $O_3$ ) with APM by the voltage differential in the body. All quantum state electrons carry a negative charge. Test with a DC voltage digital multi-meter.

Use an infrared test to check for doublets, (2) two of the APM electrons bonded together until coming into contact with free radicals.

Check the reduction of inflammation or disease in the body with a thermal scanner. As the disease decreases, the heat signature will also decrease. Use the above monitoring methods as APM is being administered.

### Increased Intelligence & Knowledge

We can have a more intelligent race of human beings by taking APM. All of the people or beings with us will have expanded mental capabilities; speed of light communications, decisions, etc. Memory has to be imbedded into the DNA. DNA defines the new memory cells and the construction of the new cells with APM. Neurons in the junction of the nervous system are rebuilt by the APM and messages (information) travel at the speed of light between the neurons. Neurons are in the brain and throughout the body. APM is the basis of all cells in the body.

APM in a quantum state is the building block of the universes. It is the key to all matter. APM oscillates like open-ended string energy.

The US Naval Research facility has confirmed super-conductivity is the communication vehicle between cells in our body, but they do not know where the super-conductivity comes from. Human and animal brains contain over 5% by weight of rhodium and iridium in the high-spin state. The rhodium and iridium must be in the super-conductive state with a "no load" electrical charge and missing an "s" electron in the "d" orbit. Iridium and rhodium are the best elements to make into super-conductive material.

The APM material is short a "d" electron and has no electrical charge; it carries a (-) negative voltage. That is why it works as APM (super-conductive material). The APM state will not deteriorate or change in the body. It will always act as a connector and conductor between the body's cells.
